

Disposable Vitrectomy Lens: Flat

Article No: 1284.DD

Andy Morris FRCOphth,
Consultant in Ophthalmology,
University Hospitals Dorset

“My experience of using the DORC Flat Disposable Vitrectomy Lenses for viewing the retina during macula surgery is very positive. The lens is more stable on the cornea than previous lenses that we have tried. Air and blood is less likely to be trapped beneath the lens during surgery. Visualisation of the macula is excellent and maintaining a central position on the cornea is straightforward.”
